

a metal shutter slidably mounted on said shell to open and close said opening,

wherein said metal shutter is provided with a screen portion, said screen portion being formed, on an outside surface thereof, with an indication area, said indication area including a stamped rough surface part which is configured to constitute a given pattern; and

wherein said screen portion is formed, on an inside surface thereof at a portion corresponding to said indication area, with another stamped rough surface part.

REMARKS

In the Office Action under reply, restriction was required as follows:

Group I claims 1-10 and 15, directed to the shutter of a disc cartridge; and

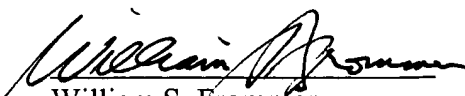

Group II claims 11-14, directed to a method (and device) for making that shutter.

Without commenting on the accuracy of the Examiner's characterization of the subject matter of the respective groups of claims, Applicant elects, **without traverse**, Group I claims 1-10 and 15 for further prosecution in the present application. To simplify the prosecution of this application, non-elected claims 11-14 are cancelled.

Applicant reserves his right to file a divisional application to re-present the nonelected claims.

An early examination on the merits of the elected claims is solicited.

Respectfully submitted,
FROMMER LAWRENCE & HAUG LLP
